

Hul'q'umi'num' Plant Project

You can work on this assignment alone or in a group.

Please choose a plant and then verify with Sally or Donna if that one is available.

Research this plant by looking up information on it in wikipedia and also in some of the standard research books (see the list Resources for Researching Plant).

You can also ask Elders for information, or ask Donna to share with you some of the stories we have about plants in our archives.

Please organize a handout to tell us about the plant. List its Hul'q'umi'num' name, English name, and its Latin classification.

- (1) Introduction: what is the main thing you think about this plant?
- (2) Location: where does it grow, at what time of year does it present?
- (3) Morphology: what are the parts of this plant and how would you describe it?
- (4) Uses of the plant: In terms of technology, what is made from the plant? In terms of foods or medicines, what parts of the plant are used, and what are its benefits?
- (5) Conclusion: any special thoughts about this plant

Please prepare you talk in a google doc, as a handout. And if you would like, you can present in google slides.

Due date: We will start presentation as soon as you get ready, starting February 27th.

You can see Sharon Seymour's paper on Devil's Club as a model.
